

- In the ER model, I was unable to restrain a jury to rate a match only once. I could not construct a relation which prevents the jury from rating again.
- For the constraint that a player only plays one position in a match, I added additional relation between a match and player, CURRENTLY PLAYS. That relation holds the position id for the player.
- I can not prevent two match happening at the same time. According to model, multiple matches can be played at the same stadium at the same time.
- In my model, entire team doesn't have to be in the match squad list. The relation, IN MATCH, only takes the player which are registered to the match
- Each coach and jury has exactly one nationality in the model, since they are attributes of corresponding entities.
- A player is enrolled to at least one team, since there is a total participation relation between a team list and team.
- Similar situation applies for the relation between rates and volleyball_match , also for volleyball_match and volleyball_match_stadium.
- Also each team is directed by only one coach by total participation relation.
